## SH09 LATEST PROTOTYPE BEGINS FLIGHT TRIALS

22 November 2018, Mollis, Switzerland

Kopter Group AG (Kopter) has commenced the next phase of its helicopter development and certification program with its latest SH09 prototype number 3 (P3).

P3 has achieved the technical necessary clearance and regulatory compliance to start flight tests. Designed Switzerland and assembled at the Kopter facility at Mollis airfield, it incorporates several improvements and modifications based on feedback resulting from the testing of Kopter prototypes 1 and 2.

P3 flew from Mollis airfield for 40 mins and successfully

completed its first flight test schedule, which included a series of maneuvers aimed to obtaining preliminary flight data, validating test design features and evaluating flight qualities.

"P3 demonstrated excellent handling characteristics today, I expect Kopter to make rapid progress in development of the SH09" reported Richard Trueman, the Kopter Chief Test Pilot after the flight.

The Kopter Chief Technical Officer & Head of Flight Operations, Michele Riccobono was on board P3 today together with Adam Reynolds the Kopter Chief Flight Test engineer. Riccobono added "I am very pleased with P3, the Kopter design team have developed this latest SH09 to bring forward Kopter development and certification activity over the coming months, with P3, we have a key tool for this task".

While P3 will continue the development of the SH09 by performing an intensive flight test campaign in Sicily (Pozzallo, Province of Ragusa), the Kopter team in Mollis will finalize the preparation of the next prototype, the Pre-Series number 4 (PS4), which will join P3 in 2019 to undertake flight testing in Sicily. In addition to its essential contribution to the development aircraft, the Mollis team will set its future focus on upgrading the existing facility into a fully operational commercial production center.

Press Release - Presse Informationen - Communiqué de Presse

"I am proud of the Kopter team and its ability to develop the next generation single engine rotorcraft" said Andreas Lowenstein, Kopter Chief Executive Officer. "With P3 we are set on the path towards delivery to our customers". He added: "We have seen a tremendous response from the market for the SH09, which offers the highest standards of safety, mission capability and cost efficiency, which our customers are asking for."

## About Kopter Group AG

We develop, produce and support a new generation of helicopter. Our 250 talented team members are based near Zürich, with production and assembly facilities in Mollis and Näfels. Our first model, the single-turbine SH09, outperforms its peers through increased modularity, modern electronic systems, and a larger cabin and cargo hold. It delivers safety, performance and comfort at low operating costs. It's built for missions accomplished, from the most demanding to the everyday.
